

**SPECIAL ISSUE ON 2021 INTERNATIONAL VIRTUAL CONFERENCE  
OF GREEN MATERIALS APPLIED IN PHOTOELECTRIC SENSORS (2021 ICGMAPS)**

**PREFACE**

The 2021 International Virtual Conference of Green Materials Applied in Photoelectric Sensors (2021 ICGMAPS) was held online in NCKU, Tainan, Taiwan, on 4th August 2021. This conference was first held in 2015, and the 2021 conference was the fifth to be held. This conference brought together international leading experts, top scientists, young researchers, and students working on green materials applied in photoelectric sensors. Topics of particular interest included the micro/nanoscale optics of green materials in sensors, photonic and optical energy in photoelectric responses, photonic and optical technologies in photoelectric sensors, and artificial intelligence in sensors.

The primary objectives of this special issue are to create a forum where scientists working on green materials applied in photoelectric sensors from universities and research institutions worldwide can present their latest research results, and to provide them with a networking platform for developing a roadmap for future research and development.
