

**SPECIAL ISSUE ON ADVANCED MICRO/NANOMATERIALS
FOR VARIOUS SENSOR APPLICATIONS (SELECTED PAPERS FROM ICASI 2023)**

PREFACE

IEEE 9th International Conference on Applied System Innovation 2023 (IEEE ICASI 2023) was successfully held in Tokyo, Japan on April 21-25, 2023. IEEE ICASI 2023 provides an opportunity for researchers around the world to communicate, facilitating collaborations and networking between science and engineering technologists in academic, industrial, global, and interdisciplinary fields. The scope of IEEE ICASI 2023 includes numerous topics, such as innovative design, information science, industrial design, computer science, applied mathematics, mechanical engineering, electrical and electronic engineering, green technology and architectural engineering, automation engineering, material science, cultural and creative research, and other related professional fields.

This special issue of *Sensors and Materials* contains 13 outstanding papers related to sensor fabrication and IoT applications selected from the papers presented at ICASI 2023. All articles were examined rigorously and impartially by the reviewers, with the acceptance of papers only after reviews conducted by the guest editors, reviewer advice, mandatory revisions, and a final proofread. This publication is expected to be a key issue of *Sensors and Materials*.

I would like to thank all the authors for their significant contributions and the reviewers for their constructive comments. In addition, I give special thanks to the staff of the Editorial Department, Ms. Naoko Makino for her invaluable help in the review and publication process and to Editor-in-Chief Prof. Makoto Ishida for his untiring support in the publication of this issue.
